

How to plant:

1. Prepare some weed free soil in a pot.
2. Moisten the paper as well as the soil.
3. Place the paper a few millimetres under the soil (or just sprinkle some loose soil over the paper)
4. Water and keep moist during germination (but don't drown the seeds) *
5. Watch your little plants grow from paper!

*To ensure that the paper stays moist during germination, you can prepare the soil and paper in a glass jar and keep the lid on so as to keep the moisture in.
