

## HOW TO APPLY VINYL DECALS

Clean the area (window, wall, tiles, wood, etc.) thoroughly, otherwise the vinyl will not stick and make sure that you know where you are going to line it up before laying it down, as you will not be able to lift it afterwards.

The transfer tape has already been adhered to the vinyl for you, however; to ensure that it is firmly adhered; use an old store/credit card and rub over the transfer tape again to remove any air bubbles.

Remove the white backing paper from the vinyl by slowly starting at the top and evenly peeling back the transfer tape, which should still have the vinyl attached to it.

If the vinyl does not stick to the transfer tape, rub the transfer tape again with your card to ensure that the vinyl does stick to it.

Slowly lower the vinyl onto the surface and rub it firmly into place utilising the credit card.

Slowly peel the transfer tape off at an angle being careful not to pull the vinyl off the surface. If the vinyl pulls away from the surface repeat the previous step.
